Arkan Pro Telecom and Information Technology

About Us

Who is Arkan Pro?

A Saudi institution that delivers solutions in the technological and digital field, and is based in the Jubail industrial city.

It also covers other different sectors such as; telecommunication, security, design, sales system, web design, and mobile apps programming.

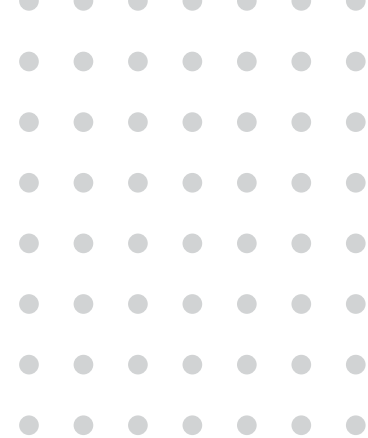

All, according to up-to-date solutions that prepare for an easier life that enables companies and individuals to pursue accurate results that speaks the vision of the Kingdom of Saudi Arabia for 2030.

Customer Service

A dedicated support team to assist you 24 hours through:

- Email: info@cpe.soft.com
- Website: www.cpe.soft.com
- Or directly with the support team through Whatsapp on the website.

Outstanding Features Of The System

- Approved by the Zakat, Tax, and Customs Authority.
- An offline version of the program that allows you to continue working even if you lose connection with the internet.
- Data Sync feature of the data you have saved in the offline mode once the connection is back.

- Supports all browsers and devices like (tabs, phones, laptops, and computers).
- Supports different screen sizes which allows for a much easier use & more perfect experience.
- Different options to support all Windows versions.

- The facility owner can work on it from any cashier device regardless of the screen size.
- Compatible with all thermal receipt printers and electronic scales.
- Barcode printing feature with every invoice.
- Supports Arabic & English with the possibility to include more languages.

- Invoices include QRCode so it's easier to read.
- Fast and smooth transitions between the menus of the system.

We are always working on developing the features of the **Cpe** program, in order to achieve a qualitative leap in the world of cashier and accounting programs to meet the needs of success partners, and to provide more features that help to accomplish business and find solutions to all problems facing store owners and all activities.

Accounting Characteristics Of The System

- Subject to IAS standards for international accounting.
- Considers the accounting cycle in daily entries and financial statements.
- Adding accounts easily.
- Supported by a guide to cost centers linked with the financial transactions.
- Shows the results of each statement related to the cost center individually, alongside the feasibility too.
- Easily return to any financial menu and account balance of the year in a few seconds only.
- Automatically saves receipt and payment vouchers and daily entries.
- Processing any financial transaction and demonstrating the results in reports.
- Secure, easy, and guarantees accuracy thanks to its easy structure, unlike other billing systems.
- Ability to follow up with all users of the system.
- Controlling the access given to users according to their position and level.
- Allow or ban users from working on one screen or multiple screens.
- Automatic processing of the entries helps save time and effort.
- A high protection system to keep the user's data safe and save it without any errors or hacking possibilities.

- Options to add, edit, and activate the system features according to the user's liking and what goes best with the facility size (small, big, medium).
- Detailed charts supported with pictures to ease the data grasp process for the user which saves time.
- Ability to add suitable menus according to the facility type and use.
- Adding an opening balance when you first start using the system through various options that include (Excel, CSV, or converting it to an Excel file)
- Saves time by calculating the cost for the process of transferring products from one storage to another immediately through the system.
- Tracking available products with alarms to products nearing the expiry date, or products near-stock out.
- Calculating the inventory disposal, profits, and inventory stock taking.
- Ability to add, delete, and edit units and determine the selling & buying units.
- Filtering your reports according to the serial number, product name, or date out of many other options.
- Sending purchase requests to suppliers through email or other methods.
- A detailed screen of the supplier's information.
- Choosing a tax system on the invoice level or the product level.
- Automatic processing of the entries to cut time and sweat.

Cpe Technical Features

- Designed in various programming languages such as (JavaScript, PHP, XML, JQuery, Ajax).
- Multiple users feature.
- User interface in different languages according to the user's choice.
- Employment of Bootstrap technology that gives the user a perfect experience when opening the program from any device.
- High authority control for the facility owner over the permissions given to other users.

The System's Homepage

- Providing reports in the form of charts and pictures.
- Delete, edit, and add icons that can be used online.
- Main menus and sub-menus that show details when clicked on.
- A neat distribution that gives you easy access to all reports to edit and print them.
- Colored tabs for different types of reports in the system.
